PROFILE

Software Engineer building hands-on experience across React, Flask, and SQL-driven applications. First place winner at the Jitume Hackathon with an AI-powered proposal generation platform, and a repeat hackathon builder. Comfortable working across the stack, from REST API design to responsive frontends, with practical Linux and Git collaboration experience.

SKILLS

- **Languages & Frameworks:** JavaScript, Python, React, Bootstrap 5, Flask
- **Database Management:** SQLite, SQLAlchemy, Supabase (PostgreSQL)
- **Tools & Collaboration:** Git & GitHub (feature branches, PRs, protected-branch workflows), Linux environment
- **Soft Skills:** Communication and Collaboration skills

KEY PROJECTS

The Exodus *(1st Place, Jitume Hackathon)*
github.com/Dapper434/ProjectGen | the-exodus-delta.vercel.app

- Built a two-agent AI pipeline (Brief Generator, Proposal Generator) that turns client meeting notes into production-ready proposals for GDF Kenya, a communications agency.
- Developed with a Flask/SQLAlchemy backend paired with a React, Vite, and Tailwind frontend, powering agent logic via NVIDIA NIM/Nemotron.
- Streamlined GDF Kenya's slow, manual proposal turnaround, taking the solution to 1st place at the 48-hour Jitume Hackathon.

Clinvia *(3rd Place, Moringa Hackathon)*
github.com/Dapper434/Clinvia | clinvia-indol.vercel.app

- Built a clinical care-tracking platform starting with tuberculosis treatment, allowing clinicians to register patients, log doses, and track adherence over months-long regimens.
- Implemented React on the frontend with Supabase/PostgreSQL on the backend, managing end-to-end integration including Row-Level Security policies, schema migrations, and configuration.
- Addressed critical treatment dropouts by providing structured, secure record-keeping to surface non-adherent patients, earning 3rd place at the hackathon.

Sokolink
github.com/Dapper434/Sokolink-Client | sokolink-frontend.vercel.app

Sokolink is a full stack marketplace platform that connects buyers and sellers directly, giving small sellers a straightforward digital channel to reach customers without relying on a third-party marketplace.

- Engineered a full-stack marketplace connecting buyers and sellers end-to-end, handling frontend and backend workflows independently.
- Implemented the frontend in React, integrating Mpesa to enable seamless, direct in-platform customer payments.
- Bridged the market-access gap small sellers face by removing dependency on heavier third-party platforms.

SokoCredit
github.com/Dapper434/SokoCredit_Client | soko-credit-client.vercel.app

SokoCredit is a multi-tenant loan management platform connecting microfinance lenders with small-scale traders and market vendors, using a savings-gated, tiered credit system to size loans fairly.

- Collaborated on a full stack loan management platform spanning a mobile-first Customer savings/loan portal and a desktop Lender portal for approvals, CRM, and operations.
- Developed frontend interfaces in React/Vite/Tailwind and backend services in Flask/SQLAlchemy/JWT, owning the Analytics & Reporting module and credit-scoring logic.
- Devised a fair lending model for unbanked borrowers combining a mandatory savings gate with a point-based tier system (A/B/C) to determine borrowing limits.

HONORS AND AWARDS

Jitume Hackathon, Genesis Digital Factory (Winner)

- 48-hour hackathon.
- Ideating, designing, and implementing solutions based on the company's workflow problem, accelerating speed and accuracy of work.

Moringa Hackathon (3rd Place)

- Awarded 3rd place for the project Clinvia, a clinical care-tracking platform for tuberculosis treatment adherence.

EXPERIENCE

Freelance Transcriptionist *(Remote, Present 2026)*

- Producing accurate written transcriptions on a freelance basis for Align Turn.

EDUCATION

Full-Stack Software Engineering, Moringa School *(Nairobi, Kenya)* ***23 Feb 2026 – 4 Sep 2026***

CERTIFICATIONS

- AI Safari Program, Power Learn Project
- Candidate certification, ICS2
