PROFILE

Software Engineer building hands-on experience across React, Flask, and SQL-driven applications. First place winner at the Jitume Hackathon with an AI-powered proposal generation platform, and a repeat hackathon builder. Comfortable working across the stack, from REST API design to responsive frontends, with practical Linux and Git collaboration experience, and currently deepening cloud skills toward AWS certification.

SKILLS

- **Languages & Frameworks:** JavaScript, Python, React, Bootstrap 5, Flask
- **Database Management:** SQLite, SQLAlchemy, Supabase (PostgreSQL)
- **Tools & Collaboration:** Git & GitHub (feature branches, PRs, protected-branch workflows), Linux environment
- **Cloud:** AWS Cloud Practitioner (CLF-C02), in progress
- Communication and Collaboration skills

KEY PROJECTS

The Exodus *(1st Place, Jitume Hackathon)*
github.com/Dapper434/ProjectGen | the-exodus-delta.vercel.app

- **Built** a two-agent AI pipeline (Brief Generator, Proposal Generator) that turns client meeting notes into production-ready proposals for GDF Kenya, a communications agency.
- **Used** a Flask/SQLAlchemy backend paired with a React, Vite, and Tailwind frontend, with agent logic powered by NVIDIA NIM/Nemotron.
- **Dealt with** GDF Kenya's slow, manual proposal turnaround. The pipeline took the project to 1st place at the 48-hour Jitume Hackathon.

Clinvia *(3rd Place, Moringa Hackathon)*
github.com/Dapper434/Clinvia | clinvia-indol.vercel.app

- **Built** a clinical care-tracking platform, with tuberculosis treatment as its first case: clinicians register patients, log doses, and see at a glance who has fallen behind on a months-long course.
- **Used** React on the frontend with Supabase/PostgreSQL on the backend, owning the Supabase integration end-to-end, including Row-Level Security policies, schema migrations, and environment configuration.
- **Dealt with** the fact that long-course treatment fails on adherence, not diagnosis: structured, secure record-keeping that surfaces the patients who need following up, earning 3rd place at the hackathon.

Sokolink
github.com/Dapper434/Sokolink-Client | sokolink-frontend.vercel.app
Sokolink is a full stack marketplace platform that connects buyers and sellers directly, giving small sellers a straightforward digital channel to reach customers without relying on a third-party marketplace.

- **Built** a full-stack marketplace connecting buyers and sellers end-to-end, handling both frontend and backend independently.
- **Used** React for the frontend, with Mpesa integration underway to support in-platform payments.
- **Dealt with** the gap small sellers face in reaching buyers directly, without depending on a heavier third-party marketplace.

SokoCredit
github.com/Dapper434/SokoCredit_Client | soko-credit-client.vercel.app
SokoCredit is a multi-tenant loan management platform connecting microfinance lenders with small-scale traders and market vendors, using a savings-gated, tiered credit system to size loans fairly.

- **Built** a full stack loan management platform as part of a team, spanning a mobile-first Customer portal for savings and loans and a desktop Lender portal for approvals, CRM, and operations.
- **Used** React/Vite/Tailwind on the frontend and Flask/SQLAlchemy/JWT on the backend, owning the Analytics & Reporting module and the credit-scoring logic within a six-module architecture.
- **Dealt with** designing a fair credit model for first-time and repeat borrowers: a mandatory savings gate plus a point-based credit-tier system (A/B/C) driving borrowing limits and loan review.

EXPERIENCE

Freelance Transcriptionist *(Remote, Present 2026)*

- Producing accurate written transcriptions on a freelance basis for Align Turn.

Jitume Hackathon, Genesis Digital Factory (Winner)

- 48-hour hackathon.
- Ideating, designing, and implementing solutions based on the company's workflow problem, accelerating speed and accuracy of work.

EDUCATION

Full-Stack Software Engineering, Moringa School *(Nairobi, Kenya)*

AI Safari Program, Power Learn Project

CERTIFICATIONS

- AWS Cloud Practitioner (CLF-C02), in progress, via AWS Skill Builder
- Candidate certification, ICS2
